

# Protecting the Environment

It is our Corporate as well as our social responsibility to protect our environment.

Our Corporate philosophy goes much beyond this thinking.

As a Company we will not adopt manufacturing and post manufacturing processes and waste disposal practices that are;

- In contravention of national or international laws and norms governing such practices and procedures;
- That will harm the natural environment and surroundings in which we and our social partners and neighbors reside.
- In addition to the above, we will;
- Make every effort to adopt practical and cost effective measures to ensure that we do not harm or damage our environment.
- Train our employees to follow procedures and waste disposal procedures in handling hazardous waste.
- Expose our employees and our environment to hazardous processes in accordance with the law and processes and acceptable practices governing such exposure.
- Constantly upgrade our equipment and use of technology in managing our environment and ensuring it is kept safe and clean.
- Design, manufacture, transport and sell our products and thereafter dispose of waste /obsolete products and materials in a manner which will not harm the environment or the users of our products.
- To create manufacturing facilities which will be set in environment friendly and aesthetically designed and landscaped facilities, which will merge with and enhance the beauty of our physical surroundings.
